P356 License Plate Capture Cameras

The P356 License Plate Capture Camera offers both image sensor (CCD) and infrared (IR) illumination in a single package. The illumination is provided by an array of LEDs which can be pulsed at varying levels allowing the camera to capture excellent plate images in bright sunlight, in darkness and through approaching headlights. A single piece cast body with internal/external heat sinking and IR transmissive window allows for simple mounting in a variety of applications. Power and communications to the camera as well as video is carried on a single cable. The P356 meets IP67 standards.

- Single package, easy-to-install and maintain
- Headlight, brake light and sunlight suppression
- Eye-safe invisible IR illumination*
- Remote Illumination, Gain and Shutter control
- Range to 75ft**/23m
- 24-hour operation
- Rugged, purged housing meets IP67 standard
- Low power consumption
- EIA or CCIR compliant
- Camera to controller distance up to 1300ft/400m

The P356 is available in a variety of illumination options to meet each particular requirement. The standard unit features eye-safe, invisible IR LEDs* in wide beam and narrow beam configurations for nearby or long range applications. All versions return excellent contrast images of license plates over a wide range of weather conditions, 24-hours a day. No auxiliary illumination, cooling or auto-iris lens are required.

*IR illuminators all classified as Class 1 or 3A according to BS EN 60825-1

**** extended range possible with optional P358**

Specifications

Video (1/2" interline transfer (CCD)

Resolution 560 TV lines
Picture Elements 768(H) x 492(V) EIA 768(H) x 582(V) CCIR

Mechanical

Size 8" x 6" x 4" plus sunshield
Weight 4.8 lbs (2.2kg)
Body Material Aluminum
Front Window IR transmissive, visibly opaque
External markings Serial number, type number and variant, PIPS Technology logo, CE mark

Electrical

Operating Voltage Nominally 48 volts unregulated DC.
Power Requirements AC (110v or 220/240v) via controller 12 VDC via optional controller (available in other voltages). 20-100 watts maximum (dependent on number of additional optional illuminators)
Video Differential video from camera to control unit EIA/CCIR compliant video output from control unit via standard coaxial cable
Isolation The camera is grounded via cable screen

Environmental

Operating Temperature -4F to -113F
Storage Temperature -40F to +158F

PIPS Technology produces a complete range of products for ALPR (Automatic License Plate Recognition). ALPR has been transformed by PIPS Technology to provide rugged, compact and cost effective systems that will deliver high accuracy license plate read rates for a variety of applications.

It manufactures a line of products that can provide a complete ALPR solutions, or individual components can be used to improve the performance of existing systems.

Using infrared light at a wavelength that has unique characteristics, PIPS' technology provides high contrast plate images even under the most difficult conditions. The pulsed invisible illumination and filter arrangement delivers crisp images even where oncoming headlights are in the field-of-view. The combination of features built into every PIPS Technology camera are ideally suited for:

- Toll enforcement (VES)
- Parking
- Travel time (ATIS)
- Access control
- Weigh-in-motion (WIM)
- Border security
- Red light violation systems
- Stolen/wanted vehicle detection
- Speed enforcement
- Origin and destination surveys
- Restricted vehicle lane/area enforcement

Many applications require an ALPR system to be integrated with other control systems whether entry gates at a secure facility or automatic tag readers in a toll system. PIPS Technology equipment is designed with those requirements already anticipated, offering a wide variety of ways in which these systems can communicate to a host or central controller. With technical and service support center in both the United States and the UK, PIPS Technology is able to facilitate systems integration and maintenance.

☐

Originally developed for the special needs of the security forces in Europe, the product range has developed into a family of fixed and portable cameras. The cameras are specifically engineered to meet the demands of acquiring first class image information from retro-reflective license plates or European number plates.

☐☐

The specific narrow band infra red technology provides the best 24 hour image quality for use with automatic license plate reading software systems.

☐

A License Plate Capture System and the Application of Infrared Illumination

☐

The nature of reflective license plates make them ideal candidates for cameras that are sensitive to infrared illumination.

License Plate Capture Comes of Age

Review of technology breakthroughs and applications.
